My concept is inspired by the diary book, according to the assignment topic which is Personal Hooby. So, I would like to create my website as my diary book that keeps all my memories(hobbies) in it. I chose to use 3 colors which makes it like taking notes with a ballpoint pen. Black and Blue represent black and blue pen. Another color, I would like to make it look like green read paper which has almost white color and a little bit yellow.

I start working by sketching the design in terms of visuals and then I create the graphic on Adobe AI to make it look clearer. I create all the elements of the graphic that I'm going to use on the website and save them as .png files.

```
1 + <!DOCTYPE html>
2 + <html>
3 + <head>
4 + <title>
5 +   My Hobby
6 + </title>
7 + <link rel="stylesheet" type="text/css" href="style_main_page.css">
8 + </head>
9 + <body>
10 +
11 + <div class="header">
12 +   <h1>My Hobby</h1>
13 +   <nav>
14 +     <a href="file:///Users/ppalalay/Documents/GitHub/NuntichaThumee_Assignment1/main_page.html">Home</a>
15 +     <a href="#">Contact</a>
16 +   </nav>
17 + </div>
18 +
19 + <div class="body">
20 +
21 + <div class="article">
22 +   <h2>Listening to Music</h2>
23 +   <p>Listening to music is like embarking on a journey to new worlds. Each file offers unique emotions and experiences, allowing me to connect with diverse characters and stories. </p>
24 +   <img alt="Movie Ticket" data-bbox="135 735 335 795" />
25 + </div>
26 + <div class="article">
27 +   <h2>Playing Games</h2>
28 +   <p>I love playing games; they let me escape into exciting worlds and challenge my mind.</p>
29 + </div>
30 + <div class="article">
31 +   <h2>Watching Movies</h2>
32 +   <p>Watching movies feels like embarking on a journey to new worlds. Each file offers unique emotions and experiences, allowing me to connect with diverse characters and stories. </p>
33 + </div>
34 + </div>
35 + <div class="footer">
36 +   <p>NuntichaThumeeSec committed 5 days ago</p>
37 + </div>
38 + </body>
39 + </html>
```

First, I start coding on the main page in HTML by referencing my sketch which includes the Header(including nav), Body(3 sections), and footer.

```
21 26 <div class="header">
22 27 <h1>My Hobby</h1>
23 28 <nav>
24 29 <a href="file:///Users/ppalalay/Documents/GitHub/NuntichaThumee_Assignment1/main_page.html">Home</a>
25 30 <a href="#">Contact</a>
26 31 </nav>
27 32 </div>
28 33 <div class="body">
29 34 <div class="article">
30 35 <h2>Listening to Music</h2>
31 36 <p>Listening to music is like embarking on a journey to new worlds. Each file offers unique emotions and experiences, allowing me to connect with diverse characters and stories. </p>
32 37 <img alt="Movie Ticket" data-bbox="135 735 335 795" />
33 38 </div>
34 39 <div class="article">
35 40 <h2>Playing Games</h2>
36 41 <p>I love playing games; they let me escape into exciting worlds and challenge my mind.</p>
37 42 </div>
38 43 <div class="article">
39 44 <h2>Watching Movies</h2>
40 45 <p>Watching movies feels like embarking on a journey to new worlds. Each file offers unique emotions and experiences, allowing me to connect with diverse characters and stories. </p>
41 46 </div>
42 47 </div>
43 48 <div class="footer">
44 49 <p>NuntichaThumeeSec committed 5 days ago</p>
45 50 </div>
46 51 </body>
47 52 </html>
```

After I finished the main details on the main page. I link the href which will link to another page when click. Then add detail on every page. I copied all the code and changed the article part (header, nav, and footer are still the same). After that, I add a Google font which I choose to match my concept. I would like to make it look like handwriting but still look clean. So, I choose this font.

```
table {
  text-align: center;
  width: 80%;
  margin-left: 10%;
}

#game_click {
  position: absolute;
  top: 236%;
  left: 20.3%;
  color: white;
  font-family: "Open Sans", system-ui;
}

#movie_ticket {
  display: block;
  margin-left: 7%;
  margin-right: 20%;
}

.container_follow_me {
  display: flex;
  justify-content: center;
  align-items: center;
}

#game_click:hover {
  color: yellow;
}

body {
  background-color: rgb(255, 255, 232);
}

.container {
  display: grid;
  grid-template-columns: 1fr 1fr;
  padding: 0;
  margin-top: 5%;
  margin-bottom: 5%;
}
```

I added graphics that I made into HTML and styled the position in CSS. I try to experiment with different commands. I style every each page to make it look exactly like my sketch.

On this page, I plan to make the left column change the picture while clicking on a song on the right column but it is interactive. I can't figure it out how to do it so I changed it into the new design.
